Nordic Ski Waxing Kit

Waxing isn't just for Olympic athletes, and we're not talking about waxing your leg hairs. The secret to getting more enjoyment and performance out of your cross-country skiing is to understand the use of wax on your skis and how it effects their performance.

The purpose of waxing is either to create friction, or grip, in the case of kick wax, or to reduce it as with glide wax. The intention with the waxing process is to make the ski base as compatible as possible with the features of the snow surface. However, the snow conditions change with time and temperature.

A one step wax for waxless skis is Easy Glide made by [Swix](#). It cleans and waxes your base providing a barrier that protects your base as well. It also prevents snow from sticking at temperatures around zero.

Waxing Clinics

We offer a waxing clinic every winter, see our online calendar on our website for the clinic date.

Junior Halfback Program

Bring back any junior ski or boot the following season and receive half of the purchase price towards new gear on trade in.

Grip wax essentials

- scraper** - used to remove old or wrong temperature wax
- iron** - a heat source to melt and apply your wax.
- grip waxes** - for the days temperature range, better to carry too many than not enough
- Swix cera wax system** - allows you to cover all temps below zero in 3 waxes!
- synthetic cork** - for smoothing & melting as you rub over the grip wax
- thermometer** - great for being sure you're using the correct temperature wax
- fiberlene** - to remove all the wax and residue from your ski base
- citrus cleaner** - to remove wax from your ski base, comes in spray or liquid
